

Usage Safety Specifications

The machine described in this document is a medium sized walk-behind Power Trowel, Model 3030 (24 edger), designed to trowel concrete and bituminious floors, parking places, cycle tracks and pathways. The trowel is equipped with 4 blades. The power emitted from an electric engine of 110V or 240V through a V-belt to the gearbox, with 2 speed direct gearing.

It is recommended not to use the trowel for any other purpose than what it is designed for, unless you have a written authorisation from BARIKELL. In case of disposal of the machine it is neccessary to respect the local environmental law.

Tests have been undertaken to determine noise and vibration levels and to evaluate the effect on the operator. The results are:

Noise and vibration levels in working conditions

Average acoustic pressure	dbA	88.7
Average acoustic power	dbA	104.7
Acoustic pressure on operator	dbA	88.1
Value of operation		
Vibration value on the handle	m/sec2	5.8
